Winter Services Program Manual

Every feature of the quote, sign, pay, storage and relaunch system — what it does, how to use it, and who is allowed to.

How to use this manual

This is the complete reference for Quest Watersports' winter services program: the customer quote page, the scan-to-sign page, the staff console, Harbor Haul Out, the emails, the spreadsheet and the owner-only jobs in Google Apps Script. Each section says **what the feature is for**, **how to do it step by step**, and **which permission it needs**. Section 15 is a one-page "I want to…" index.

Permission names appear in colour throughout, e.g. **pay**, **adjust**, **admin**. **view** means anyone who can sign in.

Section	Covers
1. The system at a glance	The pieces, the web addresses, and a season from start to finish
2. Permission levels	Every permission, who holds it, and the full action-by-permission matrix
3. Signing in	PINs, sessions, lock-outs, the console and Harbor Haul Out together
4. The customer quote page	What customers see and do; helping a customer over the phone
5. Scan to sign	The counter QR-code page
6. The staff console — a quote	Every card on an open quote
7. The staff console — season tools	Storage view, storage sheets, send to all, re-price, imports, pause, staff, restore
8. Harbor Haul Out	The four lists, pulling and storing, notes, voice, photos, measurements
9. Emails	Every email, who sends it, and the only two that send themselves
10. Money rules	Deposits, payments, refunds, credits, the payment lock, fees
11. The spreadsheet and Drive	Tabs, folders, backups, what never to do by hand
12. The spreadsheet menu	The desktop-only Quest Quotes menu
13. Owner jobs	Apps Script functions, deploys, the season rollover
14. Troubleshooting	Common messages and what they really mean
15. Quick reference	I want to… → where → permission

1. The system at a glance

A customer can build a quote, sign the storage agreement and pay a deposit from their couch; staff can run the whole operational and financial side of the season from a phone. Everything shares one set of pricing rules and one Google spreadsheet.

Piece	Who uses it	Address / where
Quote page	Customers (and staff helping them)	questws.github.io/winter-quotes_26-27/
Scan to sign	Customers at the service counter	questws.github.io/winter-quotes_26-27/sign.html
Staff console	All staff, PIN required	questws.github.io/winter-quotes_26-27/admin/
Harbor Haul Out	Staff at the harbor, PIN required (same PIN)	questws.github.io/winter-quotes_26-27/harbor-haul-out/ — add to home screen (the old /yard/ link forwards here)
Spreadsheet	Owner; read by everything	"Winter Quotes 2026-2027" in questwsottawa@gmail.com
Drive season folder	Owner; links shown in the console	Quote PDFs, Unit Photos/, Signed Contracts/, Voice Notes/
Legacy console	Fallback only	The web-app URL with ?page=admin — same PINs
Terms / Privacy	Anyone	terms.html and privacy.html on the same site

A season, start to finish

1. **Quote.** The customer builds a quote on the quote page (or staff build one with them). Contact details come first; that click is also their acceptance of the Terms. The quote is saved to the spreadsheet, a PDF is filed in Drive, and service@ is told.
2. **Sign.** The customer signs the Adobe storage agreement — on the quote page, from the **Review & sign** button in any email, or at the counter via the QR code. Staff upload the signed copy to the quote.
3. **Pay.** The customer pays a deposit (online, or in person). Staff record the payment in the console; the quote locks and becomes an **Invoice**.
4. **Schedule.** Customers who have paid are asked when they want their unit out (done now / on a date / will call). Late answers after the pay-by date add the late retrieval surcharge automatically.
5. **Haul out.** The office prints the haul-out list; staff at the harbor work the **To pull** list in Harbor Haul Out. Only units that are **both signed and paid** may be pulled.
6. **Store.** Pulled and dropped-off units appear on **To store**; staff tap **Stored**. Staff send "We have your unit". Photos, measurements, key and slip details are recorded as they are learned; measurements re-price the quote.
7. **Winter.** Balance reports reach Chris on the 1st and 15th (Nov–Apr). Late-fee warnings and late fees are staff decisions, applied from the console.
8. **Spring.** Staff send the spring alert (to one or all), "You're up next", and "Back in the water / back home".

Estimates until the 2026–2027 rate card lands
The price list still holds 2025–2026 rates, so every quote, PDF and email currently carries an **estimate** banner, and a deposit is described as **reserving a storage space and retrieval spot** — not locking in a price. This switches off everywhere at once when the new rates are entered (Section 13).

2. Permission levels

Every staff member has their own 4-digit PIN. What they can do is decided by the permissions on their account, checked **by the server** on every action — hiding a button is a convenience, not the protection. Every action is written to the **Activity Log** tab with the staff member's name.

Permission	Shown in Staff panel as	What it allows
view	Anyone signed in	Search and open quotes, print quotes, the storage overview, printing storage sheets and the haul-out list, copying the customer link, the Harbor Haul Out lists.
pay	Payments	Record payments, deposits and refunds; upload a signed contract.
adjust	Adjustments	Change what a customer owes: discounts/adjustments, edit or delete lines, late fees, penalties, price a quote request, season timing, season re-price, load an old sheet.
email	Emails	Preview and send any customer email, including "Ask them to sign" and Send to all.
photos	Photos	Upload condition photos and video; open the photo folder.
keys	Keys & slip	Physical work: keys, slip, trailer location, Harbor Haul Out alert, status (pulled / dropped off / stored) and log, staff notes, voice notes.
measure	Re-measure	Correct dimensions, trailer, motors and storage location — which re-prices the quote. Console and Harbor Haul Out.
admin	Admin	Everything above, plus: staff accounts and PINs, delete a quote, restore from backup, pause automatic emails, bulk-import a whole folder.

Two permissions have a built-in default

- **keys** — if never set for someone, they have it when they already hold **pay** or **adjust**.
- **measure** — if never set, they have it when they have **keys**. So whoever can record physical-work facts can correct a measurement.
- An explicit setting always wins, including switching it **off**.

The roster as seeded

Person	admin	pay	adjust	email	photos	keys	measure
Chris	yes	yes	yes	yes	yes	yes	yes
Jeff	yes	yes	yes	yes	yes	yes	yes
John	—	yes	—	yes	yes	yes	—*
Rex	—	yes	—	yes	yes	yes	—*
Jess	—	yes	—	yes	yes	yes	—*
Marina	—	—	—	—	yes	—	—

* Re-measure was seeded **off** for John, Rex and Jess. Chris has said the staff who handle the boats should re-measure — turn it on in the Staff panel (**Re-measure** button) if it is not on already. The live roster is whatever the **Staff & permissions** panel shows — check there.

Changing someone's permissions

Needs **admin**.

1. Console → menu (the three-line button, top right) → **Staff & permissions**.
2. Find the person. Each permission is a button; a highlighted button is on. Tap to toggle.
3. **New account:** type a name and tick the starting permissions → **Create account**. The new PIN is shown once — hand it over privately.
4. **Reset PIN:** tap **Reset PIN** on their row; the new PIN is shown once.
5. **Remove:** tap **Remove**. They are signed out everywhere immediately.
6. Changes take effect at their **next sign-in** — ask them to sign out and back in.

Safeguards: nobody can remove their own account, and the last admin can never be removed or demoted.

Every action and the permission it needs

Action	Needs	Notes
Search / open a quote	**view**	Quote number, or at least 2 letters of the last name
Print quote, copy customer link	**view**	
Storage overview; print storage sheets / haul-out list	**view**	
Harbor Haul Out — see the lists and units	**view**	
Record payment / deposit / refund	**pay**	Optional receipt email
Upload a signed contract	**pay**	PDF or photo of the signed page
Adjustment (discount or charge)	**adjust**	Optional email of updated copy
Edit or delete a line item	**adjust**	
Late fee	**adjust**	Card only shows when a balance is owed
Add or remove services (powerwash, impeller, detail…)	**adjust**	Preview then apply; nobody is emailed
Penalties (pumpout, late retrieval)	**adjust**	Nobody is emailed
Price a quote request	**adjust**	Items the customer asked to have quoted
Season timing (done now / date / will call)	**adjust**	Late date adds surcharge

Action	Needs	Notes
Re-price the season at current rates	adjust	Snapshot first; no emails
Load one old sheet	adjust	
Bulk import a whole season folder	admin	
Send any customer email / "Ask them to sign"	email	Always previewed first
Send to all (spring / fall)	email	Recipient picker; preview first
Condition photos and video	photos	Console and Harbor Haul Out
Keys, slip, trailer location	keys	
Harbor Haul Out alert (set / clear)	keys	Console only — the app shows it
Harbor Haul Out status: pulled / dropped off / stored / undo	keys	Pull only if cleared
Harbor Haul Out log entry (typed or voice)	keys	Append-only
Staff notes	keys	Never seen by the customer
Heritage Harbor list: answer slipholder yes / no	keys	No price change
Heritage Harbor list: load the marina export	admin	Replaces the old list
Fill blank slip numbers from the slip list	admin	Preview first; snapshot; no re-price
Re-measure / change storage / motors	measure	Re-prices; preview then apply
Staff accounts, PINs, permissions	admin	
Pause / resume automatic emails	admin	Banner shows for everyone
Restore from a backup	admin	Snapshot first
Delete a quote	admin	Archived, never destroyed

3. Signing in

1. Open the staff console or Harbor Haul Out on any phone or computer.
2. Type your 4-digit PIN → **Log in** / **Sign in**.
3. You stay signed in for **12 hours**. The console and Harbor Haul Out share the sign-in on the same phone, so one PIN per shift covers both.
4. **Log out** is in the menu (console) or at the top of Harbor Haul Out. Always log out on a shared or borrowed device.

> **Wrong PINs**
> After **10 wrong PINs** sign-in pauses for everyone for 15 minutes and Chris is emailed. Wait it out; if it keeps happening, reset PINs from the Staff panel.

Installing Harbor Haul Out on a phone

1. Open questws.github.io/winter-quotes_26-27/harbor-haul-out/ in Safari (iPhone) or Chrome (Android). A home-screen icon installed from the old /yard/ address still works — it forwards here — but re-adding it from the new address is cleaner.
2. iPhone: Share → **Add to Home Screen**. Android: ■ menu → **Add to Home screen** / **Install app**.
3. Open it from the new icon and sign in with your PIN.

4. The customer quote page

Public — no sign-in. Customers use it on their own; staff use the same page to build a quote with a customer at the counter or on the phone. Four unit types: **boat**, **jet ski**, **golf cart**, **e-bike**.

Building a quote

1. **Start.** Choose the unit type and enter name, phone and email (all required). The button beside the Terms acknowledgment is the customer's acceptance of the Terms; the version and time are recorded. From this moment the visit appears on the **Quote Started** tab as a lead.
2. If that email and last name already started a quote, the page offers to **continue that quote** or start a new one.
3. **Boat details** — trailer or not, length (LOA), beam, length with trailer.
4. **Engines** — one motor type (inboard, outboard, I/O or jet drive), any number of that type, and the winterization level; drive-train service.
5. **Onboard systems** — water systems, heads, pump-out, A/C, generator, ballast.
6. **Storage & retrieval** — inside, premium inside, outside, or no storage; retrieval and relaunch.
7. **Shrinkwrap & extras** — shrinkwrap, washing, and **quote requests** (hull, running gear, detailing) that staff price later. Detail options can all be chosen together on purpose.
8. **Jet skis** have their own steps: how many skis **on this trailer**, detailing, and storage. Two skis on one trailer is one quote; two trailers are two quotes. A jet ski needs a trailer. **Golf carts and e-bikes** are flat-rate.
9. **Review.** The quote ticket shows every line, the deposit due and the total. From here: **Print quote**, **Email me this quote**, or continue to **Sign & pay**.
10. **Sign & pay.** The Adobe agreement opens inside the page with the quote number filled in. The page then shows the amount to pay and a link to the secure payment page; customers put their quote number in the memo. Cards carry a 3% fee; cash, check, debit, Zelle and ACH do not.

Things the page does on its own

- Warns about anything staff will need that is missing — slip, Heritage Harbor pickup address, key location, email. Golf carts cannot be picked up without keys; boats and jet skis without keys risk a tow/start fee.
- Saves the quote to the correct storage tab and files a PDF in Drive.
- Once a payment is recorded the page goes **read-only** with a gold banner and says **Invoice**; the customer can view but not change it.
- The server re-prices every save with the same rules. If the page and server disagree, the server's figure is kept and service@ gets a PRICE DRIFT email.

Getting back to a quote

Customers reload a quote with their **quote number + last name**. Every email carries a "View my quote online" link that opens it already filled in. Staff can give the same link from the console (**Customer link** → **Copy link**, any signed-in staff) — text it or read it out.

The season-done survey

Once a customer has paid something, their quote/invoice emails ask when they want the unit out: **Done now**, **on a date**, or **Will call**. A date after the pay-by date adds the late retrieval surcharge; changing to an on-time

date removes it. Staff can set the same answer from the console (Section 6, **adjust**).

5. Scan to sign (counter QR code)

sign.html is the page the laminated counter flyer's QR code points to. It exists so the quote number on a signed contract is checked **before** the customer signs, not discovered wrong afterwards.

What the customer does

1. Scan the QR code at the counter.
2. Type the quote number — **1255**, **QW261255** and **QW-26-1255** all work; the page rewrites it in the full form so they can see it.
3. The page confirms it: a masked last initial, the unit, and the slip if known. Nothing private is shown.
4. Tap **Continue** — the Adobe agreement opens with the quote number (and slip) already filled in.
5. No quote number? **"I don't have my quote number"** opens the blank agreement.

It never blocks a signature: if the lookup fails or times out the customer can still continue. A pre-filled link can be made as sign.html?quote=1255&slip=B-14.

> **Before printing the flyer**
> Generate the QR code against **…/sign.html**, not the Adobe link. After any rename of an Adobe form field, send one real test signature through it — a mismatched field name fails silently with blank contracts.

6. The staff console — working a quote

Finding a quote

Any signed-in staff (**view**).

1. Type in the search box — a quote number (QW-26-1255 or just 1255), or at least two letters of the last name ("Kuj") → **Look up**. Phone and email are not searched.
2. One match opens directly; several show a **Matches** list — tap the one you want.
3. The X at the top of any panel closes it.

The quote card (everyone)

- **Name, status pill, Total / Paid / Balance.** A negative balance is a **credit** owed to the customer.
- **Print quote** — the current PDF.
- **Customer link** — Copy link / Open. Hidden if the quote has no last name.
- **Quote requests** — items the customer asked to have priced (Price this → Quote it, **quote**). A quoted item is **not** added to the total: it waits under **Quoted items** until the customer answers.
- **Quoted items** — each priced request and where it stands: waiting on the customer, customer asked for a call, accepted (on the quote), declined. **Accept for them** / **Mark declined** when they answer by phone; **Withdraw & re-price** to change the price. Send them the list with **Customer emails** → **Here are your quotes**: one button to a page where they press Accept, Decline or "Call me, I have questions". Every answer emails service@.
- **Season timing** — Done now / Set date… / Will call (**adjust**).
- **Signed contract** — the link, or "not on file" with Upload (**pay**) and **Ask them to sign** (**email**).
- **Line items** — Edit / X beside each line (**adjust**).
- **Email history** — every email sent for this quote, when, and by whom.

Record payment / deposit — pay

1. Enter the **amount**. A refund is a **negative** amount (e.g. -200).
2. Enter the **method** — Cash, Check #1042, Zelle, card…
3. Leave **Email receipt to customer** ticked unless there is a reason not to.
4. Tap **Record payment**. The quote locks and becomes an Invoice; the PDF is rebuilt.

Payments are a permanent ledger: never deleted, only corrected with another entry. If the console says it lost the reply, it checks what happened — **do not record the payment again** until you have reloaded the quote and looked.

Upload a signed contract — pay

1. On the quote card, under **Signed contract**: on a computer, **drag the file onto the dashed box**; on a phone, tap the box (or **Upload signed copy** / **Replace**).
2. Use the PDF from Adobe, or a photo of a paper signature. One file at a time — a new one replaces the old. Anything that is not a PDF or an image is refused.
3. The link then appears on the quote, the "Ask them to sign" buttons disappear, and if a deposit is already in, the unit becomes cleared to pull.

Condition photos & video — photos

1. Choose **Winter** (arrival / haul-out) or **Spring** (relaunch).
2. **Take photo** or **Record video** opens the camera; **Upload from gallery** picks existing files (several at once).
3. Watch the progress bar; **Open folder** shows the Drive folder.

Photos and videos go up full size. Large files upload directly to Drive and resume if the signal drops.

Keys & slip — keys

1. Fill in where the keys will be, the slip number, and (if the unit has a trailer) where the trailer is.
2. Tap **Save keys & slip**.

A blank box returns to what the customer told us. No trailer box on a quote that says no trailer — if it really has one, tick **Stored on its trailer** under Unit details (that re-prices). Golf carts and e-bikes never ask about trailers.

Unit details & storage (re-measure) — measure

1. Change LOA / beam / length with trailer (or the jet ski's stored length × width), the trailer tick, motor type / count / service level, or the storage location.
2. Optionally add a note for the customer.
3. **Preview the change** — shows each line before and after, the new total and balance, any storage move and any warning (e.g. too wide for inside).
4. **Apply this change** to save. The quote re-prices and moves tab if storage changed.
5. Tell the customer with the **Dimensions updated** email (it attaches the new PDF).

Works after a deposit — quote, deposit, pull, measure, re-bill is the normal order. A beam over the limit is flagged, never moved automatically.

Harbor Haul Out alert — keys

1. Type one line anyone must read before touching the unit — "no keys, do not tow".
2. **Save alert**. It shows on Harbor Haul Out list, at the top of the unit, and on both printed sheets.
3. **Clear it** as soon as it stops being true.

Maximum 160 characters. Set only from the console; the customer never sees it.

Harbor Haul Out status — keys

1. Tap the new state: **Pulled**, **Dropped off**, **Stored**, or undo.
2. Use **Dropped off** when a customer drives their unit in (this can also be done in Harbor Haul Out) — that puts it on the **To store** list in Harbor Haul Out.

Pulled is refused unless the unit is cleared (signed **and** paid).

Harbor Haul Out log — keys

1. Type what was observed — "gelcoat crack starboard bow, photographed".
2. **Add to the log**. Stamped with your name and the time.

Append-only: entries are never edited or deleted.

Staff notes — keys

1. Write why the quote is the way it is — discounts, odd dimensions, phone agreements.
2. **Save note**. Never on the PDF or in any email.

Heritage Harbor customer — keys

1. Shown when the customer is on the marina's customer list. It says which list entry matched, and on what — email, phone or name. A name-only match: check it is the same person.
2. Not every marina customer has a slip — some only have fuel or food accounts. Tap **Yes — slipholder** or **No — not a slipholder**. **Undo** puts the flag back.
3. Or just save the slip number under **Keys & slip** — a slip number settles it on its own. When the slip list has them, **Put B-14 in Keys & slip** fills the box; press **Save keys & slip** to keep it.

Answering yes does not add the slipholder discount — that is still Add or remove services. The answer survives the customer re-saving their quote.

Add or remove services — adjust

1. Every service the customer's own page offers is listed, showing what is on the quote now: drive train, water systems, retrieval, shrinkwrap, washing, jetski detail and the quoted-on-request items (detail, impeller, bottom paint…).
2. Tick, count or pick what the customer asked for — or untick what they no longer want.
3. **Preview the change**: the before/after lines, the new total and balance.
4. **Apply this change**. A quoted-on-request item (impeller, detail) opens a quote request under Line items — price it there with **Price this**.

Priced by the same rules as the customer's own selections, so it follows a re-measure and next season's rates — unlike a line typed into the Adjustment card, which is a fixed figure. What you set here wins over the customer's own page, on or off. Nobody is emailed.

Penalties — adjust

1. Tap to apply or remove **Pumpout service charge** or **Late retrieval surcharge**.

Charges the customer is never offered on the quote page. Nobody is emailed.

Adjustment — adjust

1. Amount: **negative for a discount** (-50), positive for a charge.
2. Wording as it should appear on the invoice.
3. Tick **Email the updated copy now** if the customer should get it now.
4. **Apply adjustment**.

Survives the customer re-saving the quote. If the thing it was attached to is later removed, service@ is emailed a REVIEW note.

Edit or delete a line — adjust

1. Line items → **Edit** on the line; change amount and/or wording → **Save change**.
2. Or tap **X** to delete the line.

Late fee — adjust

1. The card appears only when a balance is owed, and suggests an amount (a first fee of 10% of the balance; monthly 2%, minimum $5).
2. Enter the amount and invoice wording.
3. Leave **Email "you've been charged a late fee" now** ticked to tell them.
4. **Apply late fee**. Send the **Late fee warning** email first, as a courtesy.

Customer emails — email

1. Tap the email you want (list in Section 9).
2. A **preview** opens showing exactly what will be sent.
3. **Send it** or **Cancel**. Sent emails appear in Email history.
4. For **You're up next**: choose the direction (autumn haul-out or spring relaunch), type when ("tomorrow"), then send.

The card only shows if the quote has an email address.

Delete this quote — admin

1. Last card on the quote. Type the quote number exactly, and a reason.
2. If the quote has money or a signed contract, tick the extra confirmation.
3. **Delete this quote**.

Nothing is destroyed: the row goes to the **Deleted Quotes** tab with who, when and why, and the number is never reused. The PDF goes to the Drive bin (30 days); photos and contracts stay. Delete duplicates only after the customer has finished — an open quote page can re-save it.

7. The staff console — season tools

These live in the menu (three-line button) and on the home tiles; each appears only for staff allowed to use it.

Storage overview — view

1. Menu → **Storage view**. Every unit grouped by storage area.
2. Tabs across the top: **Everyone**, **No deposit**, **Deposit paid** — for "who still owes a deposit" and "who paid but never signed".
3. Tags on each row: **NO CONTRACT — DO NOT PULL** (red: paid, not signed), **NO DEPOSIT — DO NOT PULL** (gold: signed, not paid), **not authorised** (neither).
4. **Print storage sheets** — one page per storage area for the tab you are on, with keys and alerts. **Print haul-out list** — the pull order across every storage area.

> **The pull rule — Chris's rule**
> A unit is **cleared to pull only when it is both signed and paid**. Paid but not signed, or signed but not paid, is a **HOLD**: on the haul-out list for planning, shaded, stamped DO NOT PULL, with no tick box. Neither is on a separate **DO NOT TOUCH — NOT AUTHORISED** page for the office. The server decides this; the console, the paper and Harbor Haul Out just show it.

The haul-out list is sorted: ready now → requested dates (earliest first) → will call → no answer. It shows customer, unit and size, storage, trailer, slip, keys, timing, alerts and notes.

Send to all — email

1. Menu → **Send to all**. No quote needs to be open.
2. Choose **Spring** (skips No Storage customers) or **Fall** (everyone).
3. **See who this goes to** — counts per tab, anyone without an email, a quota warning over 400, and a checkbox list with everyone ticked. Untick anyone to leave out.
4. **Preview the email** — a real one, rendered for the first recipient.
5. Send. Each quote's Email history records it.

Leads and draft imports are never included.

Re-price at current rates — adjust

1. Menu → **Re-price at current rates** → **See what would change**. Nothing is written.
2. Review each quote's before → after → difference, and the season net change. Imported drafts are included (shown as tab Import). Quotes whose storage area would change are listed, not moved.
3. Select all, or tick the ones to apply → apply. It runs in batches of 15 and takes a snapshot of the spreadsheet first (link shown).
4. Discounts and adjustments survive; deposits are untouched, so balances move. One quote, QW-26-1991, is held at its agreed price through 2026–2027 and is never re-priced — every other quote is, paid or not. **Nobody is emailed** — use Send to all or per-quote emails afterwards.

Load from an old sheet — adjust; whole folder — admin

Turns last season's one-spreadsheet-per-customer files into quotes here, priced at today's rates. Broken (#REF!) files are recovered from the master price sheet.

1. **One file:** Menu → **Load from an old sheet** → pick the file → **Read it**. Check the preview (it flags comparison sheets, multiple units, and anything priced differently) → **Import as a new quote**.
2. **Whole folder (admin):** same card → **1 · Scan the folder**. It runs in the background and emails Chris a Drive report when done.
3. Open the report. Delete any row you don't want imported (or change its first cell from IMPORT). Customers who already have a quote for that unit type are skipped.
4. **2 · Import the approved rows**. Everything lands on the **Import** tab.
5. If it stalls: **It has stalled — nudge it**. To end it: **Stop the run**. If the Import tab looks wrong: **Check & repair the Import tab**.

> **Imported quotes are drafts**
> A quote on the Import tab is invisible to Harbor Haul Out, the storage view, send-to-all, the balance report and the 9am reminder. It is **released** — moved onto its real storage tab — the first time anyone emails it to the customer (staff, or the customer using "Email me this quote"). Imports are priced at the rates live on the day; the **season re-price includes the Import tab**, so drafts move to new rates with everything else and stay parked and un-emailed.

Automatic emails (pause / resume) — admin

1. Menu → **Automatic emails** → **Pause automatic emails**. This stops the 10-day reminder and the lead follow-up. A banner shows for all staff while paused.
2. To resume, the same card → **Resume automatic emails**. Resuming **restarts the clocks**: no reminders for 10 days and no lead follow-ups for 24 hours — so a season-rollover blast can't follow your own "here is your updated quote" email.

Staff emails (invoices, receipts, send to all) keep working while paused.

Staff & permissions — admin

See Section 2.

Heritage Harbor customer list — admin

1. Export the contacts list from the marina's system (.xlsx or .csv).
2. Menu → **Heritage Harbor list** → **Choose the export file**. It says how many contacts loaded and how many quotes match.
3. Storage view → **Heritage Harbor** tab lists every customer still to answer, imported drafts included. Open each one and answer on its Heritage Harbor customer card.

Matches on email, phone, or first and last name. A quote with a slip number is never flagged. Only ID, email, name and phone are kept; a new upload replaces the list. Nobody is emailed and no price changes.

1. Then load the **slip list** (same card, **Choose the slip list**): a spreadsheet with a **Slip** column and a **Name** (or Email / Phone) column — the Dockwa assignments.
2. Everyone on it is settled as a **slipholder**, and the quote shows their slip. Every Heritage Harbor customer *not* on it is settled as **not a slipholder**.
3. Parking, ramp-pass and In & Out rows never count — they are left out automatically.

4. Then **See which quotes it would fill** → check the list (look twice at any marked **name only**) → **Fill these slip numbers**. Only quotes with no slip yet are filled; a snapshot is saved to Drive first. No price changes, nobody is emailed.
5. Anyone listed with more than one slip is not filled — set theirs under Keys & slip. Run it again after new quotes come in.

Restore from a backup — admin

1. Save the **.xlsx** from a nightly backup email (6pm daily, to Chris).
2. Menu → **Restore from backup** → choose the file. It compares it with the live sheet; nothing is written yet.
3. Choose **Put back the missing quotes** (safe) or **Also overwrite the ones that differ** (only if you are sure the live copies are wrong).
4. A snapshot is taken first, so the restore can itself be undone. A restore never deletes a live quote — but it can bring back a quote that was deliberately deleted.

8. Harbor Haul Out (the phone app)

The haul-out list as a phone app for whoever is at the harbor or the lot. Same PIN as the console. Anyone can view; recording anything needs **keys**; measurements need **measure**; photos need **photos**.

List	Shows	Order
To pull	Units in a slip not yet pulled	The order customers asked for — deliberately not re-sortable
Awaiting	No slip number and nothing recorded yet — waiting for the customer to bring it in (or a boat in the water whose slip is missing)	Search; the timing customers asked for
To store	Everything pulled, plus everything marked dropped off	Search; sort by location (grouped) or name
Stored	Everything put away	Search; sort by location or name

Everyday use

1. Open the app and pick a list. A warning strip on a row is an **alert** — read it before walking over.
2. Tap a unit to open it. The first thing shown is the verdict: **CLEARED TO PULL**, a hold stamp, or **DO NOT TOUCH — NOT AUTHORISED**.
3. **To pull a unit:** open it and tap **Mark pulled**. Only offered when cleared; otherwise the button shows the hold stamp instead.
4. **Customer brought it in:** tap **Dropped off** on the Awaiting row (or **Mark dropped off** on the opened unit). Not gated — the customer brought it, we touched nothing. Only offered before anything else is recorded.
5. **To store:** tap **Stored** on the To store row — no need to open each one.
6. **Mark in storage** is also on the opened unit. **Undo — back to not started** fixes a mis-tap.
7. **Refresh** reloads the lists.

Every unit is on exactly one list. A boat you know is in the water but shows on **Awaiting** is missing its slip number — record it (Keys & slip) and it moves to To pull. The alert is set and cleared from the console only.

On an opened unit

- **Facts** — slip, keys, trailer, storage, requested timing, balance. Red means missing information somebody should find out.
- **Log** — type a note → **Save note**; or tap record for a **voice note** (stop, play back, discard or save). The recording is filed in the unit's Voice Notes folder and typed up automatically once the AssemblyAI key is installed (Section 13).
- **Photos & video** — separate buttons for camera photo, camera video, and **Choose from gallery**. Always filed as Winter, always full size. Uploads run in the background (a chip at the bottom) — keep working. A dropped signal resumes where it stopped, no signal waits and sends when it returns, and a closed app or dead battery carries on the next time the app is opened. The screen stays awake while files go.
- **Measurements** — edit the dimensions and "stored on its trailer" → **Price the change** → review → **Apply this change**. Re-prices the quote; nobody is emailed. Motors and a chosen storage move stay in the console.

If the app says it lost the reply
It will tell you not to tap again. Refresh the list and look at the unit before repeating anything — the action may already have gone through.

9. Emails

Every email except two is a human decision: previewed, then sent by a named staff member, and recorded in the quote's Email history. Replies go to service@.

Email	Sent by	Needs	Use it when
Quote / invoice	Customer ("Email me this quote") or staff (Re-send invoice)	**email**	Any time; attaches the PDF
Payment receipt	Staff, on recording a payment	**pay**	Each payment (tick box)
Updated copy	Staff, on an adjustment	**adjust**	After a discount/charge (tick box)
We have your unit	Staff	**email**	Unit has arrived / been pulled
End of season note	Staff, one or all	**email**	Autumn: last call for work, haul-out timing
Spring alert	Staff, one or all	**email**	Spring relaunch scheduling
You're up next	Staff	**email**	About to haul out (autumn) or relaunch (spring)
Back in / back home	Staff	**email**	Unit relaunched or returned
Dimensions updated	Staff	**email**	After a re-measure; attaches new PDF
Late fee warning	Staff	**email**	Before charging a late fee
Late fee charged	Staff, on applying a fee	**adjust**	Tick box on the Late fee card
Ask them to sign	Staff	**email**	No contract on file; never to a lead
10-day reminder	**Automatic**, 9am	—	Unpaid quote, 10 days after sending
Lead follow-up	**Automatic**, 12:15pm	—	Started but never finished, after 24h

Emails to staff

What	To	When
New quote / save / start notices, PRICE DRIFT, REVIEW	service@	As they happen
Nightly backup (.xlsx)	Chris	6pm daily
Balance report	Chris	7am on the 1st and 15th, Nov–Apr
Wrong-PIN lock-out, pause toggled	Chris / service@	As they happen
Bulk import report ready	Chris	When a scan finishes

Emails cannot be recalled or corrected
An email is frozen when it is sent. Fixing a link or a price afterwards does not fix emails already delivered — send a fresh one. Golf carts and e-bikes are always worded as coming "back home", never "back in the water".

10. Money rules

- **Deposits:** $500 for a unit on a trailer (and a pontoon on stands); $1,000 for other boats off a trailer.
- **Card fee:** 3%. Cash, check, debit, Zelle and ACH have none.
- **Balance = total** – **paid**, never rounded to zero. Negative is a **credit** owed to the customer and shows as CREDIT everywhere.
- **Refunds** are negative payments. Payments are never deleted.
- **The payment lock:** once any payment exists, the customer can no longer change the quote and it reads **Invoice**. Staff can still adjust, edit lines, re-measure and re-price.
- **Staff changes survive customer saves.** Discounts, line edits, priced requests, added services, penalties, fees and measurements are replayed on top every time the quote is re-priced.
- **Late retrieval surcharge** — added automatically when a requested date is after the pay-by date; removed if the date moves back.
- **Late fees** are never automatic. Warn, then charge, from the console.

Never edit money in the spreadsheet by hand
The sheet cells, the stored quote data and the PDF are kept in step by the system. Typing a new total into a cell puts them out of step. Use the console.

11. The spreadsheet and Drive

Tab	Holds
Inside, Premium Inside, Outside, No Storage, Golf Cart, E-Bike	One row per quote. A quote moves tab automatically when its storage changes.
Quote Started	Leads — people who passed the contact step and have not finished. Never emailed except the one lead follow-up.
Import	Draft quotes from the bulk import, until first emailed.
Deleted Quotes	Everything deleted from the console, with who, when and why. To undo, paste columns A–W back onto the storage tab.
Activity Log	Every staff action and automatic email, by name.

Drive

- Quote PDFs are filed in the season folder for the rates they are priced at (while prices are estimates, that is the 2025-26 folder).
- **Unit Photos/** — one folder per quote, Winter and Spring subfolders; **Voice Notes/** inside it. **Signed Contracts/**. These are "anyone with the link can view" so staff outside the Google account can open them.

Rules

- Don't hand-edit money, rename tabs, reorder columns, or delete rows. Use the console.
- The mobile Google Sheets app cannot show the Quest Quotes menu — that is why the console exists.
- Test only on quote **QW-26-1255**. Every other row is a real customer.

12. The spreadsheet menu (desktop only)

The **Quest Quotes** menu in the spreadsheet does many of the console's jobs for the selected row. It runs as the spreadsheet owner, so it is available to whoever can edit the sheet — no PIN. It only appears in a desktop browser.

Menu item	Console equivalent
Adjust selected quote (no email) / Adjust & email customer	Adjustment card
Email updated quote to customer	Re-send invoice
Show customer link for selected quote	Customer link
Edit / remove line items	Line items → Edit / X
Price a quote request	Quote requests → Price this
Record payment / deposit	Record payment card
Add late fee / Send late-fee warning email	Late fee card / Late fee warning
Create / open photo folder	Photos → Open folder
Send "We have your unit", end-of-season, spring, up next, back in the water	Customer emails card
Send end-of-season note to ALL / spring alert to ALL	Send to all

13. Owner jobs (Chris — Apps Script and GitHub)

Running a function from the Apps Script editor

1. Open the spreadsheet → **Extensions** → **Apps Script**.
2. Pick the function from the dropdown at the top → **Run**.
3. If Google asks for permissions: **Review permissions** → questwsottawa@gmail.com → **Advanced** → **Go to (project)** → **Allow**.
4. Read the **Execution log** at the bottom for the result.

Function	When	Success looks like
initStaff()	Once, ever	Six PINs printed. Refuses to run a second time.
setupAllTriggers()	Once, or to repair	Reminder 9am, backup 6pm, balance report 7am, lead follow-up 12:15pm, transcript sweep 5am (Central). Safe to re-run.
testLogo()	Once	Grants Drive/Gmail access for the logo in emails.
checkRestoreAccess()	Before first restore	"Both permissions are granted…"
bulkImport1_Scan() / 2_Apply()	Fallback for the console buttons	Emails a report / imports approved rows
bulkImportStatus / Continue / Stop / Repair	If a bulk import misbehaves	Shown in the log
importAudit()	Once, after the Sept 19 importer fix	Repairs, then lists imports in the Activity Log that are no longer on the sheet — the ones to run again
repairImportedRows()	To repair only	Puts back any quote stranded in a header row and lists any quote number on two rows. Imports now do this themselves.
emailGuides()	After the guides change	Guides emailed to Chris

Turning on voice-note transcription

1. Apps Script → **Project Settings** (gear) → **Script properties**.
2. **Add script property**: name **ASSEMBLYAI_API_KEY**, value: the service tracker's AssemblyAI key. Save. Nothing else is needed.

Deploying a backend change

- Preferred: GitHub → Actions → **Deploy Apps Script** → Run workflow (Claude can run this for you). It checks the code first and updates the **existing** deployment.
- By hand: paste the file → Save → **Deploy** → **Manage deployments** → **pencil** → **Version: New version** → **Deploy**.
- **Never "New deployment"** — it creates a new web address and silently cuts off the quote page, console and Harbor Haul Out.
- To undo: Manage deployments → pencil → pick the previous version.

- The quote page, console and Harbor Haul Out update when changes are merged to **main** on GitHub. Hard-refresh (Ctrl+Shift+R) to see them.

The season rollover (when the 2026–2027 rate card arrives)

1. **Pause automatic emails** (console, admin).
2. Update **SEASON** dates and **PRICES** in the Annual Update Zone of pricing-engine.js, and set **provisional: false** in the same change.
3. Re-baseline the price fixtures, sync the engine, run the checks, deploy.
4. Console → **Re-price at current rates**; review; apply. Imported drafts on the Import tab are included and stay there until sent.
5. Email customers their real quote (Send to all or individually).
6. **Resume automatic emails.** The clocks restart, so no reminder crowds your email.

14. Troubleshooting

You see	What it means / what to do
"Session expired — log in again."	Your 12 hours are up or your account changed. Sign in again.
"Your account doesn't have permission for that"	The server refused it. Ask Chris or Jeff to add the permission; then sign out and back in.
"Too many wrong PINs…"	The 15-minute lock-out. Wait.
The console says a write went unanswered / still running	Do **not** repeat it. Reload the quote and check whether it happened (payments especially).
"Enter both your quote number and last name." inside the console	A lost request; the console now detects this. Reload; if it persists, tell Chris.
A card or button is missing	Your permissions don't include it, or it doesn't apply (e.g. no email address → no email card; no balance → no late fee card).
An old version of a page	Hard-refresh (Ctrl+Shift+R, or close and reopen the app).
Customer says "Quote not found"	Check the quote number and the last name as stored; send them the Customer link from the console.
PRICE DRIFT email	The customer's page and the server disagreed; the server's figure was kept. Check the quote.
"could NOT re-apply — REVIEW" email	A staff change's target line was removed by the customer. Re-apply the discount/edit by hand.
A unit won't mark as Pulled	It is not signed and paid. Fix that first.
Voice note says it was not typed up	The AssemblyAI key isn't installed; the recording is still saved.
The storage view is slow the first time	It is cached for two minutes after the first load.
Wondering how slow the console is	The footer shows the last call's time, and how much of it was spent on the server.

15. Quick reference — I want to…

I want to…	Where	Needs
Find a customer	Console search box	view
Text a customer their quote	Quote card → Customer link → Copy	view
Take a deposit	Record payment / deposit	pay
Give a refund	Record payment, negative amount	pay
File a signed contract	Signed contract → Upload	pay
Chase a signature	Ask them to sign	email
Give a discount	Adjustment, negative amount	adjust
Charge a late fee	Late fee warning, then Late fee	email / adjust
Price something they asked about	Quote requests → Price this	quote
Send them their quotes to accept or decline	Customer emails → Here are your quotes	email
They said yes / no on the phone	Quoted items → Accept for them / Mark declined	quote
Record when they want it out	Season timing	adjust
Fix the boat's size	Unit details & storage / Harbor Haul Out Measurements	measure
Move them to inside storage	Unit details & storage	measure
Record keys / slip	Keys & slip	keys
Clear a Heritage Harbor flag	Storage view → Heritage Harbor, then the quote's card	keys
Warn staff about a unit	Harbor Haul Out alert	keys
Mark a unit dropped off	Harbor Haul Out app (Awaiting) or status card	keys
Mark a unit pulled / stored	Harbor Haul Out app, or its status card	keys
Note something about a unit	Harbor Haul Out log (or a voice note in the app)	keys
Photograph a unit	Photos card / Harbor Haul Out	photos
Print the haul-out list	Storage view → Print haul-out list	view
Email everyone in spring	Send to all → Spring	email
Move the season to new prices	Re-price at current rates	adjust
Bring in last year's sheets	Load from an old sheet	adjust / admin
Stop automatic emails	Automatic emails	admin
Add staff / reset a PIN	Staff & permissions	admin
Delete a duplicate quote	Delete this quote	admin

I want to…	Where	Needs
Undo a mistake in the sheet	Restore from backup	**admin**

Quest Watersports · 1800 N 2871st Rd, Ottawa, IL 61350 · (815) 433-2200
