

Making a New Quote

Start to finish on the customer page — for staff building one, or for walking a customer through it.

The quote page is at **winter.questws.com**. It is the same page customers use, so building a quote on someone's behalf and letting them build their own are the same process. It works on a phone.

Every quote you start creates a record

Pressing the button at the end of the first step logs a row immediately, before any pricing is shown. If you are only poking around, use the test quote rather than making a new one — otherwise you leave a lead in the system that will be emailed a "finish my quote" note the next day.

Step 1 — Who and what

The page asks for four things before it will show any prices:

- First name
- Last name
- Phone
- Email

All four are required. Then pick the unit — **Boat, Jetski, Golf cart** or **E-bike** — and fill in the year, make and model.

Below the continue button is a line saying that continuing means agreeing to the Terms and Privacy Policy, with links to both. That press records which version of the Terms they agreed to and when. It is a real agreement, so do not click it on a customer's behalf without their say-so.

If the email and last name match a quote somebody already started and did not finish, the page offers to **continue that quote** instead of making a new one. Take it — it stops one person becoming three leads.

Boat measurements

Field	Why it matters
LOA (length overall)	Drives shrinkwrap, powerwash, acid wash and outside storage.
Beam	Drives storage area, the acid wash rate, and whether the boat fits inside.
Length with trailer	Used instead of LOA for inside storage when the boat stays on its trailer.
On its trailer?	Changes how storage is measured and which deposit applies.

Jet skis are asked for stored length and width instead. Golf carts and e-bikes are not measured at all — they are flat-rate.

Step 2 — Engines (boats)

Choose **one** motor type — inboard, inboard/outboard (sterndrive), or outboard — and how many. A boat can have several of one type but never a mix, so picking a type clears the others and greys them out. A genuinely unusual rig is handled by Quest as a line-item adjustment later, not by building a boat that cannot exist.

Then pick **Basic** or **Full service**. Both descriptions are on screen. If the boat has transmissions or V-drives, enter how many — outboards do not have them.

Step 3 — Onboard systems (boats)

Fresh water system, head, generator and so on. Tick what applies. Anything the customer is unsure about can be left off and added later from the console.

Step 4 — Storage & retrieval

Choice	What it means
No storage with Quest	Winterizing and services only. The customer keeps the unit.
Outside storage	Priced per foot of length.
Inside storage	Priced per square foot. Retrieval, set and relaunch are included.
Premium inside storage	Very limited space, requires Quest approval, returning customers prioritised. Also includes retrieval.

A boat that is **not** on a trailer and has a beam over the inside limit will not be offered regular inside storage — the option is hidden rather than offered and then refused. Jet skis are inside-or-nothing.

This step also asks for **where the keys will be**. That is required for boats, jet skis and golf carts. Golf carts **cannot be picked up without keys at all**, and for boats and jet skis there is a \$500 tow/jump-start fee warning if we arrive and cannot move it. Golf carts also need the Heritage Harbor street address.

Step 5 — Shrinkwrap & extras (boats)

Shrinkwrap, powerwash, acid wash, bottom paint, detailing and so on. Two things worth knowing:

- Detail options are **not** mutually exclusive. Exterior and interior, wash and wax and full detail, touch-up and strip-and-reapply can all be selected together on purpose — Quest quotes every option and removes whatever the customer does not take.
- Acid wash automatically suppresses the powerwash charge; you do not need to avoid ticking both.

Some services cannot be priced without seeing the unit. Ticking those adds them to **Quotes requested** — they appear on the quote as "we will price this" and staff give them a real price later from the console.

Step 6 — Review

Every line with its price, the total, the deposit, and what the total becomes if paid by card (+3%) or after the pay-by date (+10%). If anything is missing the page says exactly what — for example "LOA for shrinkwrap" — rather than quietly leaving a service off.

From here the customer can:

- **Print** the quote.
- **Email themselves a copy** — this also saves the quote and files it on the right storage tab, and sends Quest a notification.

- **Come back later** using the quote number and last name.

Step 7 — Sign & pay

Signing is where the Adobe agreement will sit once the contract is finalised. Until then customers see a short "signing almost here" note rather than a broken button. Paying a deposit already works and goes through the normal Quest payment page.

Once any payment is recorded the quote **locks**: the customer's page becomes read-only with a gold banner explaining why, and every mention of "quote" becomes "invoice". Changes after that point are made by staff from the console.

Reloading a quote later

On the quote page, enter the **quote number** and **last name**. Everything comes back — every selection, every staff change, and the official total. If Quest has re-measured the unit or moved its storage since, the customer sees the corrected figures, not what they originally entered.

The "finish my quote" email contains a link that fills both fields in automatically, so a customer usually only has to press one button.

What happens behind the scenes when a quote is saved

- The server re-prices the quote from the customer's selections using the same rules the page used, and stores its own figure.
- Any staff changes already on the quote are re-applied on top.
- A PDF is generated and filed in Drive.
- The row lands on the tab matching its storage location, and any stale copy on another tab is removed.
- service@ gets a notification. The customer only gets an email if they asked for one.

Quick reference

Question	Answer
Quote number format	QW-26-#### — assigned automatically.
Can a customer change a quote after paying?	No. It locks. Staff can still change it from the console.
Customer picked the wrong storage	Console → Unit details & storage → change it, preview, apply. It re-prices and moves tabs.
Customer picked the wrong motor count	Same card. Type, count and level are corrected together.
Customer wants something not on the list	Add it from the console as an adjustment, or price one of their requested items.
Quote started but never finished	It sits on the Quote Started tab and gets one "finish my quote" email the next day at 12:15pm.
