

Using the Staff Console

Every option on the admin page, and the permission each one needs.

The console lives at questws.github.io/winter-quotes_26-27/admin/. It works on a phone. Add it to your home screen and it behaves like an app.

Signing in

Enter your 4-digit PIN. There are no usernames — the PIN identifies you, which is why no two people can ever share one. A session lasts **12 hours**, then you sign in again. Ten wrong PINs in a row pauses login for everyone for 15 minutes and emails an alert; that is deliberate, and it is the reason a wrong PIN is worth reporting rather than retrying.

The six permissions

Each account carries any combination of five permissions, plus an optional admin flag. You only see the controls you are allowed to use — if a card is missing from your console, that is why.

Permission	What it unlocks
view	Looking up quotes, searching, the storage view, printing. Everyone who can sign in has this.
pay	Recording payments, deposits and refunds. Uploading a signed contract.
adjust	Anything that changes what a customer owes: adjustments, editing or deleting lines, pricing requests, late fees, dimensions, motors, storage, season timing.
email	Previewing and sending customer emails.
photos	Uploading and viewing condition photos.
keys	Recording where the keys are and which slip a boat is in, and leaving a staff note on a quote. Yard work — it changes nothing a customer owes, so the crew who actually find these things out can record them.
admin	Everything above, plus staff accounts and backup restore. An admin bypasses the individual permissions entirely.

Current intent for the team: Chris and Jeff are admins. John, Rex and Jess have pay, email, photos and keys. Marina has photos only.

Accounts created before the keys permission existed do not have the setting on them at all. Those fall back to "already trusted with payments or adjustments", which is the yard staff and the admins. Ticking or unticking the box on an account always wins over that fallback, including to turn it off.

Finding a quote

Type a quote number (**QW-26-####**) or part of a last name and press Look up. A partial name that matches several people gives you a list to pick from. Needs **view**.

The quote screen, card by card

Quote summary

Option	Permission	What it does
Total / Paid / Balance	view	Balance shows CREDIT in green when a customer has overpaid.
Print quote / Print invoice	view	Opens a printable copy in a new tab and prints it. Identical to the customer's PDF. Says "invoice" once a payment exists. If nothing happens, allow pop-ups for the site.
Line items	view	Every priced service. Edit and delete buttons appear only with adjust.
Edit a line / Delete a line	adjust	Change an amount or its wording, or remove it. Recorded so a customer re-save cannot undo it.
Quotes requested	adjust	Services the customer asked about but that were not priced automatically. Give one a price and it becomes a normal line.
Season timing	adjust	Record done now / done on a date / will call. A date after Nov 15 applies the late retrieval surcharge, and changing it back to an on-time date removes it again.
Signed contract	pay	Upload the signed agreement. Replaces any prior copy.
Email history	view	Every email sent for this quote, when, and by whom.

Record payment / deposit

Option	Permission	What it does
Amount + method	pay	Records a payment. The quote locks: the customer's page goes read-only and the wording flips to Invoice.
Negative amount	pay	Records a refund. Payments are never deleted — a refund is a negative entry, so the history stays honest.
Email receipt to customer	pay	Sends a receipt. Receipts never carry the season-done question.

Adjustment

A one-off charge or discount. Negative for a discount. Needs **adjust**. The optional "email the updated copy now" sends the revised quote immediately.

Late fee

Suggests the standard first fee (10% of balance) and monthly fee (2%, minimum \$5), but you type the amount and the wording that appears on the invoice. Needs **adjust**. Only appears when there is actually a balance owing.

Unit details & storage

All of this needs **adjust**, and all of it goes through Preview → Apply. Nothing is written until you confirm the before/after.

Option	What it does
LOA / Beam / Length with trailer	Correct a boat's measurements. Jet skis show stored length and width instead.

Option	What it does
Stored on its trailer	Changes how storage is priced and the deposit tier.
Motor type / number / service level	Fix a wrong motor count or type. Changing type clears the others — a boat can have several of one type but never a mix. Type 0 if there are genuinely none; leaving it blank is refused on purpose.
Transmissions / V-drives	Only shown for inboard and sterndrive. Switching to outboard clears it, because outboards have no V-drive.
Storage location	Moves the quote to another storage area and re-prices it. The row physically moves to the new tab, carrying photos, payments and links with it.
Note for the customer	Optional line included in the notice email.
Preview the change	Shows the line-by-line difference and the new total. Writes nothing.
Apply this change	Commits it. Recorded in the Activity Log.

A beam over the limit is flagged, not acted on

If a corrected beam no longer fits its storage class, the preview warns you and says "Nothing has been moved." Moving that customer is your decision and their conversation — use the storage dropdown yourself if that is what you agree.

Staff notes

Needs **keys**. Why this quote is the way it is — the discount you agreed on the phone, the odd dimensions, the thing you would otherwise have to reconstruct a year later. Type it, press Save note. Saving a note changes nothing else: no status, no re-price, no new PDF.

The customer never sees this

It is not on the quote PDF, not in any email, and not sent back to the quote page when a customer reloads their quote. That is the whole value of it — a note you would hesitate to write is not worth having. It also survives the customer editing and re-saving their quote, which would otherwise wipe anything held only on our side.

Condition photos

Option	Permission	What it does
Winter / Spring	photos	Chooses which folder the photos go into.
Take photos now	photos	Opens the camera directly.
Upload from gallery	photos	Pick existing photos. Uploads three at a time.
Open folder	photos	Opens this quote's photo folder in Drive.

Customer emails

All of these need **email**. Every one shows you a preview of exactly what will send before it sends — the preview is built by the same code as the real email, so what you see is what the customer gets.

Button	What it sends
We have your unit	Confirms arrival, links the arrival photos if there are any.
End of season note	The autumn one. Says the season is winding down, offers a last chance at detailing or winter work — but only if they have not already asked — and polls when they want to be hauled out.
Spring alert	Asks when they would like their unit back and offers early / any time / late. Their answer sets their place in the queue.
Back in / back home	Confirms the unit is back. Wording changes for golf carts and e-bikes — they come "back home", never "back in the water".
Dimensions updated	Explains a re-measure, storage move or motor correction, and attaches the rebuilt quote or invoice. The wording follows what actually changed.
Late fee warning	Warns before a fee is applied. You write the wording.
Re-send invoice	Sends the current quote or invoice again.
You're up next	Pick the direction first — haul-out / pick-up in the autumn or relaunch / return in the spring — then type when you expect to do the work. The two read differently on purpose: in autumn it is the last easy moment to add work, in spring it is the last moment before the unit goes back.

The home page, and the menu

With no quote pulled up, the console shows everything it can do as a set of cards, each with a line saying what it is for. Tap one to open it. You only see the cards your permissions allow, so what is on your home page is what you are able to do.

The same list is behind the **Menu** button at the top right — three stacked lines — which is how you reach any of it *with* a quote already open — the cards give way to the quote once one is loaded, and come back when you close it. The menu closes on Escape or a tap outside it.

Where it goes	Permission	What it does
Storage view	view	Every unit grouped by storage area, with keys and balances. "Print yard sheets" gives one page per area for use in the yard; "Print haul-out list" gives one sheet for the whole yard, in the order customers asked to come out.
Send to all	email	The two seasonal announcements, to everyone at once.
Load from an old sheet	adjust	Turn one of last season's per-customer spreadsheets into a quote here.
Re-price at current rates	adjust	Move quotes onto this season's prices.
Automatic emails	admin	Pause or resume the two emails that send unattended.
Staff & permissions	admin	Add, remove and re-permission staff.
Restore from backup	admin	See below and Document 4.

Where it goes	Permission	What it does
Log out	—	Ends your session on this device.

Send to all — needs email

The two seasonal announcements can go to every customer at once. Open it from the menu; you do not need a quote pulled up. There are only two, and nothing else can be sent this way — a receipt or a late-fee warning is about one person and has no send-to-all version.

Step	What happens
Pick which one	End of season note (autumn) or Spring relaunch alert .
See who this goes to	Reads the sheet and reports back. Nothing is sent . You get the total, a count per storage area, how many quotes have no email address on them, and a warning if the number is large enough to run into Google's daily limit.
Preview the email	Opens the real email for the first person on the list — not a description of it.
Untick anyone	The full list appears with everyone ticked. Untick the few who should not get it — per person, or All / None for a whole storage area. The count and the send button follow as you go.
Send to N	Asks you to confirm, tells you how many you unticked, then sends. Each one is recorded on that customer's quote and in the Activity Log.

Unticking everybody does not send to everybody — it refuses. The list you see is the only list it can send to; it can be made shorter, never longer.

Who never receives one

Anyone who started a quote and walked away without finishing it. They are on the Quote Started tab, they are not customers, and no seasonal email will ever reach them. Quotes with no email address on them are skipped and counted for you. The spring alert also skips No Storage customers — there is nothing to relaunch for a unit we never had. The end-of-season note does go to them, because they still have to get the unit to us.

Both are also on the spreadsheet menu, and both go to the same people either way.

Load from an old sheet — needs adjust

Before this system, every quote was its own spreadsheet built from the "Winter services menu master pricing" template. This reads one of those and makes a quote here — for a customer coming back after a few seasons, or for a one-off somebody still did the old way.

Step	What happens
Pick the sheet	The season folder on Drive, listed alphabetically. Type in the search box to narrow it. Or upload a one-off file from your phone or computer.
Read it	Shows you the customer, the unit, the dimensions it found, the lines it recovered and what today's rates make of them. Nothing is written and nobody is emailed .
Add a note	Optional — anything to remember about this one. It lands as the staff note on the new quote.

Step	What happens
Import as a new quote	Creates it here with a fresh quote number, on the right storage tab, priced at current rates.

Three things it will tell you rather than guess

A sheet with two storage options is a comparison, not a quote. Pricing inside against outside on one page was how the difference got quoted, and that sheet's total is a number nobody was ever given. It will not add them up or pick one — it asks you which was taken, and the shrinkwrap and retrieval lines follow that choice.

Broken files are readable. Where the prices and labels came back as #REF! because they were live links to the master workbook, the customer's own quantities are still in their file and the master supplies the meaning at the same positions — but only after it has proved the two grids really are the same template, and it refuses outright if they are not. **Extra units are reported, not merged.** A jet ski or golf cart tagged onto a boat sheet becomes a separate quote that you make.

An imported quote carries the customer's choices, not their old figures, and prices like every other quote here. Old numbers are not honoured on the strength of having been written down.

Re-price at current rates — needs adjust

A quote only re-prices when the customer reloads and re-saves it, and a quote with a payment on it never re-prices at all. After a rate change that leaves the sheet holding a mix of old and new prices with no way to tell which is which. This is the staff-side answer to that.

Step	What happens
Preview	Prices every quote on the sheet at current rates and reports before, after and the difference for each one, plus the net movement across the season and how many of them have money on them. Nothing is written.
Tick who moves	Everyone is ticked. Untick anyone who should stay as they are.
Apply	Writes them in batches of 15 and saves a snapshot of the whole sheet first. Nobody is emailed.

What it does and does not touch

Every staff change is replayed on top of the new prices, so a discounted quote stays exactly its discount below an identical undiscounted one. Deposits are untouched — payments are a ledger, so the balance simply moves. A quote whose storage tab would change is reported and left where it is, because relocating somebody is a conversation. And nobody is told: who hears about a price change, and when, is a separate decision that stays yours.

Automatic emails — admin only

Pauses the only two emails that send without anybody clicking: the ten-day quote reminder and the "finish my quote" follow-up. Give a reason when you pause — it is shown in the banner, so whoever reads it knows why and when it should lift.

- It does **not** stop staff sending anything. Invoices, receipts, the seasonal notes and send-to-all all still work, each one previewed and clicked by a person.

- While it is on, every member of staff sees a banner at the top of the console, not just admins — a pause nobody can see is a pause somebody forgets to lift.
- Turning it on or off is recorded in the Activity Log and emailed out.
- Resuming sends to everyone who became due while it was paused.

Why this exists

Both automatic emails invite the customer to open their quote again, and a reloaded quote re-prices against whatever rates are live. Across a season rollover — or any stretch where the prices on the page are not the prices we mean — that is the one thing you do not want running unattended overnight.

Keys & slip

Needs **keys**. A card on a loaded quote, in the left-hand column under the condition photos.

Field	Notes
Where will the keys be?	Shown for everything except e-bikes, which have none.
Slip number	Shown for boats and jet skis. Owning a trailer does not mean the boat is on it, so this is asked either way.
Clearing a box	Falls back to whatever the customer originally told us, rather than blanking it.

This is what the yard actually reads

What you type here is what appears on the yard sheets, on the haul-out list, and in the "you're up next" email. A line at the top of the card tells you what is still missing — and if anything is, the haul-out email asks the customer for it directly. Once we have both, that email says them back instead, so a key location recorded in April gets checked before somebody drives out in October.

Printing for the yard

Sheet	What it is for
Yard sheets	One page per storage area. For walking a building and checking units off — what is in here, whose it is, where the keys are.
Haul-out list	One page for the whole yard, ordered by when each customer asked to come out: ready now first, then stated dates soonest first, then "will call", then anyone who has not answered. Shows the customer, the unit and its dimensions, storage area, whether it is on a trailer, the slip number, where the keys are, and any note they left. This is the planning sheet.

Staff & permissions — admin only

Option	What it does
Permission buttons	Tap to turn a permission on or off for that person. Takes effect immediately.
Reset PIN	Issues a new PIN. Their old one stops working at once. The new PIN is shown once — write it down.

Option	What it does
Remove	Deletes the account and signs them out everywhere. Cannot be undone from the console.
Create account	Name, tick the permissions, optionally admin. The new PIN is shown once, in a gold box.

Three things the console will refuse, because none can be undone from inside it: removing your own account, removing or demoting the last admin, and issuing a PIN that is already in use.

Restore from backup — admin only

Upload one of the nightly .xlsx backups; the console shows what is missing, what differs and what exists only on the live sheet, then you choose what to put back. Nothing on the sheet is ever deleted, and a snapshot is saved before anything is written. Full walkthrough in **Document 4**.

If something does not work

What you see	What it means
A card is missing	Your account does not have that permission. Ask Chris or Jeff.
"Session expired"	Twelve hours have passed. Sign in again.
"Too many wrong PINs"	Someone entered ten wrong PINs. Login is paused 15 minutes.
Print does nothing	Your browser blocked the pop-up. Allow pop-ups for the site.
Nothing looks new after an update	Hard-refresh the page — your phone is showing a cached copy.
"Admins only"	The action is restricted to admin accounts.

Every action you take in the console is recorded in the Activity Log tab of the spreadsheet, with your name and the time.
